Run the App

- Run the application from anaconda prompt
- Open new anaconda prompt from the start menu
- Navigate to the folder where your python script is.
- Now type “python app.py” command
- It will show the local host where your app is running
- on <http://127.0.0.1:5000/>
- Copy that local host URL and open that URL in the browser. It
- does navigate me to where you can view your web page.
- Enter the values, click on the predict button and see the
- result/prediction on the web page.
- Showcasing the output on UI
- Predict page is displayed when predict button is clicked. In predict page, enter
- input values to predict the liver disease or not. Finally, the prediction for the
- given input features is shown.Home Page:
- Prediction Page:

Output:

If you have the liver Disease the Result show as
You not a have a liver disease it will show as
